

Safety Training Solutions for Mining

Whether measured in employee injury, fatality rates, or lost labor hours and productivity, the costs for mining operations can be enormous. In fact, the average cost of a lost work injury in mining is approximately \$30,000 per incident, a strong incentive for mine operators to commit to injury prevention. Given that Mine Safety & Health Administration (MSHA) regulations require mine operators to provide 24 hours of initial safety training to all new miners, and a minimum of 8 hours of refresher training each year, the time and money being spent to train new miners is just huge.

There's a better way to train your miners, with efficiency that reduces liability and expense.

On Demand Courses

Vivid training creates an interactive, engaging experience for miners; using short films and animations, miners work through realistic safety

scenarios that are developed with instructional designers and industry experts, to be effective. On average, basic critical safety courses are completed in about 20 minutes. Most on demand courses can be taken anytime, anywhere, so miners can train in the field, at home, or when traveling—whichever is best for the company.

MSHA Virtual Live Training

Vivid is also the only company that offers a virtual live training experience to satisfy Mine Safety & Health Administration (MSHA) regulatory requirements; new miners can log in remotely and take the virtual training from anywhere. Hosted by industry safety experts, it's a great idea for companies out there competing for mining contracts and finding themselves with a need to train a group of employees quickly. With no travel and zero logistical overhead, the virtual, live MSHA training saves money, with convenience that employees and management appreciate.

For accountability, Vivid's Safety Training System handles all of those questions for program administrators who run the software; tracking courses, scheduling training, testing for recertification, and building reports for specific regulatory requirements, isn't difficult with the simplicity of the System interface. And no matter where or when training happens, the secure stream of data through Vivid's Safety Training System, the 'whose doing what' details essential for true accountability, never stop updating in real time or accruing for eventual reporting, or auditing.
